

1 **Abstract of Disclosure**

2 A carrying apparatus includes a metal basket and a metal frame. The
3 metal basket includes a bottom and a wall attached to the bottom. The
4 wall includes an upper edge and a bent connection extending from the
5 wall to the upper edge. The metal frame includes a vertical portion, a
6 first horizontal portion, a bent connection extending from the vertical
7 portion to the first horizontal portion, a second horizontal portion, a
8 retroflex connection extending from the first horizontal portion to the
9 second horizontal portion, a rolled edge extending from the second
10 horizontal portion. The bent connection of the basket is clamped
11 between the bent connection and the rolled edge of the frame. Therefore,
12 the frame is secured to the basket.
